

## **NEXGEN**

### **Product Appearance**

Several finishes offer a modern wood grain appearance. The colors and finishes of NEXGEN™ laminates make it nearly impossible to differentiate from real wood. The stile & rail construction, with perpendicular grain direction and mitered joins, perfectly resembles a solid wood door. On surface laminates allow for perfect color matching and fade-resistance years after the original cabinetry is installed. Whether you want to add more cabinetry or simply replace a door, any new addition will be a perfect match to the original.

### **Notable Features**

On 5-piece door components in NEXGEN™ laminates offer a permanent antibacterial surface with higher heat, scratch, and stain resistance versus RTF (vinyl) and solid wood doors.

There is no staining or finishing required, therefore saving time, labor, and equipment costs. (Glazing or highlighting can be added.)

To ensure a quality product, only premium MDF is used. While solid wood profiles tend to warp and twist, MDF profiles remain straight. (MDF FSC, NAUF, Fire Rated or Water-resistant cores also available.)

Zero formaldehyde emission may be achieved with assembled doors.

## NEXGEN COLORS WE STOCK

In the chamfer (8M) profile we have the following colors:

After Hours – M2010
